

ZOE FRANCIS

Backend Developer | Node.js · Express.js · MongoDB

GitHub: github.com/zoelaenski • Email: abigailoluchi532@gmail.com

PROFILE

Motivated backend developer and graduate of TS Academy, with hands-on experience building REST APIs using Node.js, Express.js, and MongoDB. Currently working as a Backend Developer at The Relevant Woman, contributing to a real TypeScript codebase. I enjoy designing clean, functional systems and am actively growing my skills in authentication, real-time communication, and API deployment.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript (beginner)

Backend: Node.js, Express.js, REST API design, JWT Authentication, Socket.io

Database: MongoDB, Mongoose ODM

Frontend: HTML, CSS, JavaScript (DOM manipulation)

Tools: Git, GitHub, Postman, VS Code

Learning: API deployment, TypeScript (advancing)

WORK EXPERIENCE

Backend Developer | *The Relevant Woman* | 2026 – Present

- Working on a real-world TypeScript codebase as part of a development team
- Contributing to backend features, code reviews, and collaborative engineering workflows
- Applying Node.js, Express.js and TypeScript skills in a live production environment

PROJECTS

Library Management API — *Node.js · Express.js · MongoDB* [View on GitHub →](#)

- Full REST API for managing a school library system, built from scratch — hosted on GitHub
- Handled CRUD for 4 entity types (Authors, Books, Students, Attendants) with pagination and search across 500+ records
- Implemented borrow/return logic, validation middleware, and JWT authentication for protected routes

Banking System API — *Node.js · Express.js · MongoDB* [View on GitHub →](#)

- REST API simulating core banking operations — deployed live on Render
- Features: account creation and management, deposits, withdrawals, and transfers with transaction validation
- Implemented JWT authentication to secure all account routes and protect sensitive financial endpoints
- Applied security best practices including hashed passwords, protected env variables, and minimal JWT payload

Multi-Warehouse Supply Chain (Capstone) — *Node.js · Express.js · MongoDB* [View on GitHub →](#)

- Team capstone project — a supply chain management system across multiple warehouses

Quotes Generator — *HTML · CSS · JavaScript* [View on GitHub →](#)

- Interactive web app that displays and generates quotes dynamically using vanilla JS

Digital Clock — *HTML · CSS · JavaScript* [View on GitHub →](#)

- A live digital clock built with JavaScript, using `padStart` and real-time DOM updates

Birthday Website — *HTML · CSS · JavaScript* [View on GitHub →](#)

- A themed, interactive birthday celebration website — deployed live on Render

EDUCATION & TRAINING

Backend Development Program | *TS Academy* | 2024 – 2025

- Completed a structured curriculum covering Node.js, Express.js, MongoDB, REST APIs, and authentication
- Built multiple real-world projects including a full Library Management API and Banking System API
- Graduated with hands-on experience in JWT authentication, REST API security, and real-time communication concepts
